

Kieran Ryan

Gameplay programmer experienced in Unity, Unreal Engine, and proprietary engines, with a focus on gameplay systems, multiplayer features, and technical problem solving.

Work Experience

2026 - Current | Savery Entertainment: Software Engineer

Developing and migrating UI systems from Unity's legacy UI framework to UI Toolkit, modernising existing interfaces and improving maintainability.

2025 - 2026 | Coatsink: Game Programmer

Promoted to Game Programmer, taking increased ownership of gameplay systems, player-facing features, and production tasks across multiple commercial projects.

Men in Black: Most Wanted - Unity | Meta Quest 2/3

Implemented VR locomotion, event-driven SFX/VFX systems, localisation functionality including language selection UI and resolving network and gameplay issues.

BattleKin - Meta Horizon | Horizon Worlds (Mobile)

Implemented tutorial systems, including sequence logic, triggers, UI overlays, and interactive dialogue flows to guide player progression.

2022 - 2025 | Coatsink: Junior Game Programmer

Implemented gameplay features, tools, and engine systems across commercial projects, working with cross-functional teams to deliver maintainable and scalable solutions.

Astronimo - In-House Engine | Steam PC

Developed engine-level systems including Steamworks API integration, custom localisation and text filtering tools, alongside debugging/profiling utilities to diagnose memory leaks and networking issues.

Batman: Arkham Shadow - Unity | Meta Quest 3

Collaborated with designers and animators to implement interactive cinematics, developed workflow tools, and created conversation systems and audio integrations using Wwise.
